DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-25, drawn to a fluorescence quencher, classified in class 546, subclass 75.
- Claims 26-31, drawn to a labeled nucleoside, classified in class 536, subclass 26.6.
- III. Claims 32-36, drawn to nucleobase labeled polynucleotide, classified in class 536, subclass 26.6.
- IV. Claims 37, drawn to a method of labeling polypeptide, classified in class435, subclass 5.
- V. Claims 38-47, drawn to a method of labeling polynucleotide, classified in class 435, subclass 6.
- Claims 48-49, drawn to a 5'- or 3'-quencher labeled polynucleotide, classified in class 536, subclass 26.6.
- VII. Claims 50-66, 72-75, drawn to a method of primer extension and kit, classified in class 435, subclass 91.1.
- VIII. Claim 67, drawn to a method of ligation, classified in class 435, subclass 6.
- IX. Claims 68-71, drawn to a method of hybridization, classified in class 435, subclass 6.

Art Unit: 1637

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III and IV-IX are related as products and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the quencher of Group I can be used for the labeling nucleoside or polypeptide, and the labeled nucleoside can used for the method of Group VII, or VIII, or IX. Further Group III can be used in a hybridization method or PCR and the compound of Group II can be used as catalyst in enzymatic reactions, for example.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: The moiety Q can be selected from 2 different molecules as described in instant claim 1 for example. And X can be an amino acid, peptide, etc., as described in instant claim1, for example.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

Art Unit: 1637

readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1637

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jezia Riley whose telephone number is 703-305-6855. The examiner can normally be reached on 9:30AM - 5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached on 703-308-1119. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-3014 for regular communications and 703-308-4242 for After Final communications.

Any-inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Patent Analyst Monica Graves whose telephone number is 703-305-3002, or to the Technical Center receptionist whose telephone number is 703-308-0196.
